The COVID-19 pandemic heightened the need for linkages to social, regional, environmental statistics, well-being, and sustainability within a broadened SNA framework. Also, the Covid-19 pandemic has put a spotlight on the unequal access to public services and their unequal impact.

The fifth goal of the UN sustainable developments goals is to achieve gender equality and empower all women and girls. Gender equality is not only a fundamental human right but a necessary foundation for a peaceful, prosperous and sustainable world. But what is the connection between national account issues and gender inequality?

This paper will stretch a line between those two. The paper will show the gender distribution of money social transfers and in-kind social transfers and their influence on gender inequity. The paper will point out the importance of gender distribution upon macro and micro statistics. This linkage is highly important for social and economic policy and has significant implications upon the government policy in the allocation of public resources.

This paper will show the STIK and social money transfers effects on women and emphasizes the need for analysis policy impacts in a demographic way – by gender. Linking public sector spending, activity, and outcomes and allocating inequality of access to public services and their impact on outcomes are highly important in planning and conducting policy. These effects emphasize that linking public sector activity and outcomes cannot ignore inequality within the population.
