

## **Statistics Canada's Sub-annual Distributions of Household Economic Accounts**

### **Abstract**

After the onset of the Covid-19 pandemic Statistics Canada began developing sub-annual Distributions of Household Economic Accounts (DHEA). Leveraging the agency's long standing Social Policy Simulation Database and Model (SPSD-M), as well as some new nowcasting efforts, survey and administrative data sources, the team was able to produce quarterly DHEAs which lagged the reference period by approximately 6 months. Statistics Canada is continually working to enhance its sub-annual DHEAs, including adding further granularity and improving differences between micro and macro data sources. This presentation will provide an overview of Statistics Canada's sub-annual.
